It was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. However, most of these programs had several drawbacks, and AutoCAD was developed to provide a user friendly and affordable alternative. As an initial product release, AutoCAD shipped with only the basics. In AutoCAD version 1.0, four-color printing was supported, three-dimensional space was limited to certain simple shapes, and data was stored in a proprietary format. However, the fundamental concept and philosophy of AutoCAD — a system that could be used by a single person to provide high quality, professional-level drafting, design, and document editing — had been established. AutoCAD also included an array of standard drawing commands and dialog boxes that provided great flexibility. By 1984, the official AutoCAD version 1.5, the ability to read and write major CAD formats such as DWG, DXF, and IES, was released. This was followed by several other major versions and upgrades of AutoCAD, each of which brought new features and capabilities. Adobe Illustrator In the mid 1980s, Adobe Illustrator became the dominant vector graphics application on personal computers, overtaking CorelDRAW. Adobe Illustrator was initially offered only as a desktop app, but has since grown into a web, mobile, and embedded product as well. Although these apps are all based on the same code, they have each been developed and refined differently, and users typically consider them to be separate products with separate features. Early Versions AutoCAD and Adobe Illustrator had a lengthy history of product development prior to the release of AutoCAD version 2018. Adobe Illustrator's roots

Turkey is currently hosting 3.6 million Syrian refugees, whose situation in Europe was highlighted in a controversial BBC documentary that claimed the European Union had "lost control" of the situation. Turkey's prime minister, Ahmet Davutoglu, was among a group of European politicians who watched the documentary in the Turkish capital on Tuesday, but the president Recep Tayyip Erdogan called the footage "truly shameful". He said the report was "profoundly embarrassing" and added that the European Union had become "hypocritical". "It is clear that Europe's concern and criticism over Turkey's migration and refugee policies is hypocritical," Mr Erdogan told a news conference in Ankara. "They do not accept that Turkey is a transit point and a safe

haven for Syrian refugees. They do not accept that Turkey is hosting over 3.6 million refugees," he added. "Is there a Syrian refugee who wants to move to Europe?" Mr Erdogan said, calling for Syrian and Iraqi refugees to be resettled in Syria rather than "migrating through Turkey to Europe". "We will work hard to have refugees come to Turkey. We will do our best to provide the necessary aid, including supplying of aid, to help to resettle refugees in their respective countries," he said. The European Union is currently weighing a decision to grant Turkey the status of an EU candidate. The European Commission said last month that it would start talks on this "once Turkey meets the criteria". The BBC's Jon Donnison said it was the strongest criticism of Turkey's refugee policy since the European Parliament last month called for Turkey a1d647c40b
