- Ability to delete the volume controls
- Ability to hide the picture in picture button
- Ability to hide the picture in picture

### What's New in the?

Extensions for the Firefox web browser in common and third-party programs The most popular anti-virus and firewall programs are compatible with Firefox extensions. One of the first things to know about the Firefox browser and its extensions is that they are extensions that add extra functions to the web browser. An extension, in simple terms, consists of pieces of code and resources that can add functionality to your web browser without modifying the program's core. This means that you can add extra features to Firefox, such as a more responsive mouse, personalized search engines or more useful browser extensions. Apart from the fact that they are highly effective tools, Firefox extensions are pretty easy to install. However, before they can be added to the web browser, users first have to download the extension. The process is rather simple and consists of a few steps: Using Firefox Open the Extensions Manager by opening the Firefox menu and clicking on Tools > Add-ons. In the Add-ons Manager, click on Install from File and navigate to the extension file you wish to install. Click on Open after you have saved the file. Installing the correct extension Most of the extensions that you can download come with a list of compatible programs, such as Firefox, Safari and Chrome. When installing these extensions, it is important to ensure that the program you are installing them with is compatible with them. That being said, there are some extensions that can be installed on any Firefox program. Using browser extensions When a browser extension is installed, it adds a button to the browser toolbar. To access the extension, click on the button. As you can see, the toolbar button looks like a gear icon. Right-clicking on the button will bring up the pop-up menu and you will find several options. Tip: If you find an extension that does not work as expected, the most common problem is that the extension was not installed in the correct program. To double check, go to the extensions manager and look for the program. Compatibility issues Now that you know what Firefox extensions are, you should also understand what makes a browser extension compatible with a particular program. This involves a combination of programming languages, the operating system and the program that the extension is being installed into. To make sure that your extension is compatible, you should be able to install it on any Firefox program. Some browser extensions for Firefox are also compatible with the Google Chrome and Internet Explorer. For instance, TheSocialRank extension can be used in all the major browsers. It provides an Internet search service that allows you to quickly

---

find and access information on any topic. Browser extensions are an extremely popular tool. With the help of these extensions, you can add more functions to your web browser. Whether you use your browser to view PDFs, surf the Internet or work on a program
