“The structure is reminiscent of Final Fantasy, with skills branching in various combinations that you can upgrade depending on your playstyle. With each journey and battle, you'll slowly advance through three levels in which your character's stats and actions will get a stronger and more reliable boost. The combat is simple, with a combat screen in which you can switch to various stances with simple directional commands. You can also use item combos to your advantage, as the game seamlessly combines two or more items to unleash powerful attacks and buff spells. The story is a beautiful and surprisingly profound commentary on the mechanics of fantasy and fiction itself.” - Siliconera Nurul, elden lord of the lands between: “Mimicking the core gameplay of other action RPGs, such as Final Fantasy XI, the game will take the player through the golems, knights, and other people who inhabit the Lands Between, as they must learn to unite to defend the lands against those who wish to rob and destroy the sacred balance.” - Siliconera This is a game that carries the weight of the people behind it. We are always striving to improve the quality of the game for our players, and we take fan feedback very seriously. We thank you for all your support and welcome your ideas for how to improve the game. [MEGATHREAD](#) | [OTHER LINKS](#) [MEGATHREAD](#) | [OTHER LINKS](#) **FEATURES**

## **How To Crack:**

**Double click the downloaded dll's. It will be extracted in the same folder where you downloaded it. You can now create a new c++ project, add a new c++ dll reference and link it to the new created project.**

**Open up the project in the.sln's explorer, right click on the project's solution node and select the 'Add reference..'**

**Select the newly added reference and then from the 'C/C++' property window in the properties for this reference select 'Additional dependencies > headers'**

**Copy the Elden Ring 'eldern\_ring\_static' path to the new added reference project.**

**Double click the Main.cpp' in the project explorer to add a new c++ class reference for the DShowDevice in the same project.**

**In the Property window of the reference for 'eldern\_ring\_static', right click on the 'path to the library' property and select the 'Add value' option, select the Elden Ring library 'eldern\_ring' and hit ok, now right click on the value and select the 'inherits' option and set it to '0'**

**Open the Elden Ring project and add 'eldern\_ring' library to the project.**

**Create a new project with only a c++ window class, add a reference to the 'eldern\_ring' dll to the class, add a bindable property and a label property that binds to the bindable property. In the property grid window, select the bindable property and then in the property grid window, go to the property inspector and select 'binds to' selected property and select the window class name property. Click on the 'copy ' option and paste the bindable property with the bind view.**
