Catalytic cracking systems are employed in the petroleum industry to convert heavy hydrocarbon feeds to lighter hydrocarbon products, such as gasoline. Typically, the hydrocarbon feeds are cracked in one or more reaction tubes containing one or more cracking catalysts. The cracked hydrocarbons are then separated into various product fractions. In such systems, the hydrocarbon feed is typically atomized, mixed with a transport gas such as steam, and then mixed with a solid catalyst. The mixture is then conveyed through a reactor containing a reactor tube filled with the cracking catalyst. The hydrocarbon/steam/catalyst mixture is then mixed with a recycling gas, such as steam, and passed through a riser reactor containing a tube or a series of parallel tubes containing a stack of cracking catalyst. In this manner, the hydrocarbon is cracked and converted to lighter products. During the reaction, carbonaceous deposits, referred to

Creature Categories: Evolving the "Full Monster" Category, Superbiary Category, Rules Longevity: Some of the monsters are from existing Mythic Supplement materials so we decided to stick to them and spend the extra time writing them to fit the framework the FRPG has.Federal Authorities have charged a Sydney man with sending \$100,000 worth of scam emails after he was unmasked by the AFP as an impostor. The Australian Federal Police (AFP) said fraudsters were paying the man to send communications that appeared to be from one of their customers, and enticed them to transfer their money to accounts controlled by the perpetrators. "This is no exception, but just another example of scammers trying to make a quick dollar out of unsuspecting victims," AFP Deputy Commissioner National Digital Crime Squad Detective Superintendent Andy Hillier said. The AFP said the scam was targeting the elderly, especially those using banks and payment services like PayPal. The sender of the emails would typically claim to be a family member who is out of contact, and offer urgent money transfers or ask the recipients to lend money. The AFP said that victims believed the emails would have been sent by their loved ones, and decided to send them money, before realising their transactions were fraudulent. In some cases, the scammers would ask the victim to change bank accounts, and would transfer the money into the new account. In others, the crooks would get people to pay money into their PayPal accounts. Mr Hillier said the scammers were charged yesterday, for sending the \$100,000 transaction. "We have charged this particular individual, we don't believe there are any other individuals connected to the scam, and we don't believe it's a professional operation," he said. "Some scammers operate out of their home and from small offices and these scammers are not professionals. "They are really not trying to defraud people, they just need the money to pay for their normal living expenses. "It's not something that they can make money or repeat very often. But if they see someone responding to their emails they will keep sending them more often." Mr Hillier warned people to be wary of emails that look like they are from friends or relatives. "There are ways to tell whether it is authentic or it's fraudulent. You should be very wary of an email that looks like it is from a relative that they don't

. **Pro game of turn-based melee with 40 kinds of weapons. Word list + main bugs can be viewed here. Set in a fantasy world. It doesn't have an RNG component. There are 6 characters to choose from and you will compete against AI of all sizes: elves/dwarves/gnomes etc. (of which the latter two are type-dependent). Rageball. Pick word from a list and damage counter is increased in each consecutive word. Win by breaking more chars of the enemy wordlist. If the enemy wordlist is empty, you have won. If it is not, you will be defeated. Any other similar game? I would suggest that these are too frustrating. I can't play Rock-Paper-Scissors, but I can play Mah-Jong. I can't play Score, but I can play Rock-Paper-Scissors. This is a fun game - it makes you think. From one game to the next I am already stuck at the wordlist stage. I want to avoid RNG of course, but there are strategies to reach the perfect word list as fast as possible. A: The More Than Overrated game is one word, and in it you are locked into a particular list order to try and hit every word. For each turn you have one of ten things you can do to try and do one of the ten words, and if you do one of them the second of those ten things you can do happens. There are the best 10 options available to you on any given turn. Here are the basics so you can see how it plays. [Warning: There's probably more to the game than this.] There is a capital "W" and a "K" in the top right. Click the "W" for word and "K" for wordlist. Your letters turn blue when you go left, red when you go right, and green when you have no letter. When you land on a word that isn't in your wordlist, you lose. On a word that is in your wordlist, you win. Some of the ten words are powered-up versions of other words. The first time you play that game, it will tell you which of the ten words powers which of the other ones. Whenever you play for more than a day, you get a daily power-up which adds a new ability to the game. Other games like**

Set in World War 2, a tense and brutally unforgiving world, the best of both sides face-off. The campaign will pit your leadership abilities against those of the Soviets on the Eastern front. Control the fate of the Axis forces from Stalingrad to Kharkov and everywhere in between. What makes this one of the best games in the series is how interactive it is, the combat system is great, but where you really get an immersive experience are the scenarios. Tapping into the most feared weapon of the war, the nuclear bomb, is the biggest achievement in the game design. It really forces you to be the leader of an army, making it the best. This is my second Vomit Biscuit game, and just as good if not better. Good job! This review is based on the Xbox 360 version of the game. The Campaign So I start off by apologizing. I haven't really played the original Unity of Command (2011), and I wasn't really the target audience when this game was released. Unfortunately, I fell into the trap of thinking that this game was tied to the Unity series. I mean, after playing the original Unity of Command, I thought this game would be a continuation of the game, but it was really a lot like the original Unity of Command (2011) with a little bit of the Stalingrad campaign (2005), mixed in. Unity of Command (2005) was a great game, and I really enjoyed playing it. I think this game is even better, but it is not a continuation, it is a whole new game. Yes, there is some of the original Unity of Command (2011) in this game, but at the same time, the events of the original Unity of Command (2011) are put into the timeline of this game. I say the events of the original Unity of Command (2011) are put in the timeline because in this game, you have the option of playing it (unlike the original Unity of Command (2011) where you couldn't really do so). This game, despite being a multiplayer game, is still very much focused on the Soviet Union. This time, you play as a Soviet Union commander and not a German one. I personally love the computer opponent. You see, the computer opponent is really good at commanding the Germans, and really bad at commanding the Soviets. The issue with the computer opponent is that he doesn't actually do anything. He's
